QUANTITATIVE CLASSIFICATION OF IGNEOUS ROCKS

Based on chemical and mineral characters, with a systematic nomenclature.

By WHITMAN CROSS, JOSEPH P. IDDINGS, LOUIS V. PIRSSON and HENRY S. WASHINGTON; with an introductory review of the "*Development of Systematic Petrography in the Nineteenth Century*," by WHITMAN CROSS.

CONTAINS a critical review of various systems of petrographic classification that have appeared in the nineteenth century which forms a historical introduction to the new system of quantitative classification and the nomenclature proposed by MESSRS. CROSS, IDDINGS, PIRSSON, and WASHINGTON. The authors also propose a simplified classification and nomenclature of igneous rocks for use in the field and for those who are not petrographers. This is based wholly on megascopic rock characters, and is virtually a restoration of the earliest system in vogue with the founders of the science. Methods of calculating mineral composition from the chemical composition of rocks, and the reverse, with tables to aid the operation, are set forth at length. There is also a glossary of new terms employed by the authors.
